

McLab Tutorial

www.sable.mcgill.ca/mclab

Part 3 – McLab Frontend

- Frontend organization
- Introduction to Beaver
- Introduction to JastAdd

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-1

McLab Frontend

- Tools to parse MATLAB-type languages
 - Quickly experiment with language extensions
 - Tested on a lot of real-world Matlab code
- Parser generates ASTs
- Some tools for computing attributes of ASTs
- A number of static analyses and utilities
 - Example: Printing XML representation of AST

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-2

Tools used

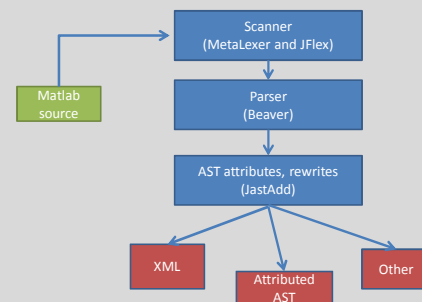

- Written in Java (JDK 6)
- MetaLexer and JFlex for scanner
- Beaver parser generator
- JastAdd “compiler-generator” for computations of AST attributes
- Ant based builds
- We typically use Eclipse for development
 - Or Vim ☺

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-3

Frontend organization

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-4

Natlab

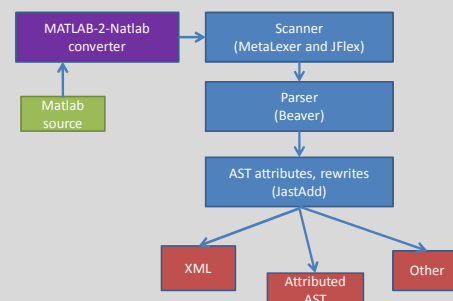

- Natlab is a clean subset of MATLAB
 - Not a trivial subset though
 - Covers a lot of “sane” MATLAB code
- MATLAB to Natlab translation tool available
 - Written using ANTLR
 - Outside the scope of this tutorial
- Forms the basis of much of our semantics and static analysis research

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-5

Frontend with MATLAB-to-Natlab

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-6

How is Natlab organized?

- Scanner specifications
 - `src/metalexer/shared_keywords.mlc`
- Grammar files
 - `src/parser/natlab.parser`
- AST computations based on JastAdd
 - `src/natlab.ast`
 - `src/*jadd, src/*jrag`
- Other Java files
 - `src/*java`

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-7

MetaLexer

- A system for writing extensible scanner specifications
- Scanner specifications can be modularized, reused and extended
- Generates JFlex code
 - Which then generates Java code for the lexer/scanner
- Syntax is similar to most other lexers
- Reference: "MetaLexer: A Modular Lexical Specification Language. Andrew Casey, Laurie Hendren" by Casey, Hendren at AOSD 2011.

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-8

**If you already know
Beaver and JastAdd...**

**Then take a break.
Play Angry Birds.
Or Fruit Ninja.**

Frontend-9

Beaver

- Beaver is a LALR parser generator
- Familiar syntax (EBNF based)
- Allows embedding of Java code for semantic actions
- Usage in Natlab: Simply generate appropriate AST node as semantic action

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-10

Beaver Example

```
Stmt stmt =
    expr.e { return new ExprStmt(e); :}
  | BREAK { return new BreakStmt(); :}
  | FOR for_assign.a stmt_seq.s END
    { return new ForStmt(a,s); :}
```

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-11

Beaver Example

```
Java type
Stmt stmt =
    expr.e { return new ExprStmt(e); :}
  | BREAK { return new BreakStmt(); :}
  | FOR for_assign.a stmt_seq.s END
    { return new ForStmt(a,s); :}
```

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-12

Beaver Example

Node name in grammar

```
Stmt stmt =
  expr.e {: return new ExprStmt(e); :}
| BREAK {: return new BreakStmt(); :}
| FOR for_assign.a stmt_seq.s END
  {: return new ForStmt(a,s); :}
```

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-13

Beaver Example

Identifier for node

```
Stmt stmt =
  expr.e {: return new ExprStmt(e); :}
| BREAK {: return new BreakStmt(); :}
| FOR for_assign.a stmt_seq.s END
  {: return new ForStmt(a,s); :}
```

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-14

Beaver Example

Java code for semantic action

```
Stmt stmt =
  expr.e {: return new ExprStmt(e); :}
| BREAK {: return new BreakStmt(); :}
| FOR for_assign.a stmt_seq.s END
  {: return new ForStmt(a,s); :}
```

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-15

JastAdd: Motivation

- You have an AST
- Each AST node type represented by a class
- Want to compute attributes of the AST
 - Example: String representation of a node
- Attributes might be either:
 - Inherited from parents
 - Synthesized from children

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-16

JastAdd

- JastAdd is a system for specifying:
 - Each attribute computation specified as an aspect
 - Attributes can be inherited or synthesized
 - Can also rewrite trees
 - Declarative philosophy
 - Java-like syntax with added keywords
- Generates Java code
- Based upon “Reference attribute grammars”

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-17

How does everything fit?

- JastAdd requires two types of files:
 - .ast file which specifies an AST grammar
 - .jrag/.jadd files which specify attribute computations
- For each node type specified in AST grammar:
 - JastAdd generates a class derived from ASTNode
- For each aspect:
 - JastAdd adds a method to the relevant node classes

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-18

JastAdd AST File example

```

abstract BinaryExpr: Expr ::=
    LHS:Expr RHS:Expr
PlusExpr: BinaryExpr;
MinusExpr: BinaryExpr;
MTimesExpr: BinaryExpr;

```

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-19

JastAdd XML generation aspect

```

aspect AST2XML{
..
eq BinaryExpr.getXML(Document d, Element e){
    Element v = d.getElement(nameOfExpr);
    getRHS().getXML(d,v);
    getLHS().getXML(d,v);
    e.add(v);
    return true;
}
...

```

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-20

Aspect
declaration

aspect AST2XML{

```

..
eq BinaryExpr.getXML(Document d, Element e){
    Element v = d.getElement(nameOfExpr);
    getRHS().getXML(d,v);
    getLHS().getXML(d,v);
    e.add(v);
    return true;
}
...

```

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-21

aspect AST2XML{

"Equation" for an
attribute

```

eq BinaryExpr.getXML(Document d, Element e){
    Element v = d.getElement(nameOfExpr);
    getRHS().getXML(d,v);
    getLHS().getXML(d,v);
    e.add(v);
    return true;
}
...

```

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-22

aspect AST2XML{

..

Add to this AST class

```

eq BinaryExpr.getXML(Document d, Element e){
    Element v = d.getElement(nameOfExpr);
    getRHS().getXML(d,v);
    getLHS().getXML(d,v);
    e.add(v);
    return true;
}
...

```

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-23

aspect AST2XML{

..

Method name to be
added

```

eq BinaryExpr.getXML(Document d, Element e){
    Element v = d.getElement(nameOfExpr);
    getRHS().getXML(d,v);
    getLHS().getXML(d,v);
    e.add(v);
    return true;
}
...

```

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-24

```

aspect AST2XML{
..
eq BinaryExpr.getXML(Document d, Element e){
    Element v = d.getElement(nameOfExpr);
    getRHS().getXML(d,v);
    getLHS().getXML(d,v);
    e.add(v);
    return true;
}
...

```

Attributes can be parameterized

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-25

```

aspect AST2XML{
..
eq BinaryExpr.getXML(Document d, Element e){
    Element v = d.getElement(nameOfExpr);
    getRHS().getXML(d,v);
    getLHS().getXML(d,v);
    e.add(v);
    return true;
}
...

```

Compute for children

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-26

JastAdd weaving

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-27

Overall picture recap

- Scanner converts text into a stream of tokens
- Tokens consumed by Beaver-generated parser
- Parser constructs an AST
- AST classes were generated by JastAdd
- AST classes already contain code for computing attributes as methods
- Code for computing attributes was weaved into classes by JastAdd from aspect files

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-28

Adding a node

- Let's assume you want to experiment with a new language construct:
- Example: parallel-for loop construct
 - parfor i=1:10 a(i) = f(i) end;
- How do you extend Natlab to handle this?
- You can either:
 - Choose to add to Natlab source itself
 - (Preferred) Setup a project that inherits code from Natlab source directory

6/4/2011

McLab Tutorial, Laurie Hendren, Rahul Garg and Nurudeen Lameed

Frontend-29

Steps

- Write the following in your project:
 - Lexer rule for "parfor"
 - Beaver grammar rule for parfor statement type
 - AST grammar rule for PforStmnt
 - attributes for PforStmnt according to your requirement
 - eg. getXML() for PforStmnt in a JastAdd aspect
 - Buildfile that correctly passes the Natlab source files and your own source files to tools
 - Custom main method and jar endpoints
